

2010 JTAT Summer Workshop

Language Learning with Technology
- Newest and most Innovative ways -

「テクノロジーを使用した外国語学習 : 最先端の技術と情報の検証」

By Hajime Kumahata
Language Technology Consultant
Rice University

~Abstract~

A decade ago, we promoted the language use in the simulated world through technology. That is no longer the case. Technology has become part of our life and we are immersed in it. Therefore it is natural to use technology to communicate in the target language. For our instruction, we must have a realistic understanding of the various functions, uses, strengths, and limitations of technology in educational settings.

In this workshop, we will examine the possible instructional practices and activities through discussing Web 2.0 tools, local applications, and online self-study tools. Each application will be introduced, briefly explained, and demonstrated. Some of the instructional usage may be discussed. You may find the list of these tools at <http://www.delicious.com/langtech/JTAT2010>. Please watch the following video before attending this workshop, <http://www.teachers.tv/videos/37336>.
